SEND SMS

The **Send SMS** API allows you to send SMS messages to recipients using your assigned shortcode.

It supports sending a message to a **single number** via GET and to **one or multiple numbers** via POST.

For multiple numbers, provide them as a **comma-separated string** (maximum **1000 numbers** per request).

Tip

To schedule messages add `timeToSend` in the POST request with a valid date string that resolves to a Unix timestamp or the unix timestamp itself. For example "2019-09-01 18:00"

GET Method

Endpoint:

```
https://{url}}/api/services/sendsms
```

Parameters:

Parameter	Description
<code>apikey</code>	Your valid API key
<code>partnerID</code>	Your Partner ID
<code>message</code>	URL-encoded message (GSM7)

shortcode	Sender ID/Shortcode
mobile	Recipient Mobile number
timeToSend	Optional param

Example Request (GET):

```
https://{{url}}/api/services/sendsms?apikey={{apikey}}&partnerID={{partnerID}}&message={{message}}&shortcode={{shortcode}}&mobile={{mobile}}
```

POST Method

Endpoint:

```
https://{{url}}/api/services/sendsms
```

Request Body:

```
1  {
2      "apikey": "{{apikey}}",
3      "partnerID": "{{partnerID}}",
4      "message": "{{message}}",
5      "shortcode": "{{shortcode}}",
6      "mobile": "{{mobile}}"
7  }
```

json

Sample Success Response:
